Findings and Analysis: An Overview

FINDINGS AND ANALYSIS: AN OVERVIEW

First Destinations for the College Class of 2017 provides a wealth of information about the employment possibilities, the educational options, and the public services undertaken by graduates relatively close to the time they receive their degree. The results presented here represent a baseline for assessing where graduates at the undergraduate and graduate levels land within six months, on average, after receiving their degrees. The report reaffirms that the overwhelming majority of graduates, regardless of the type of school or academic program from which they graduated, are able to land a positive outcome fairly quickly after graduation.

The results cover students who have received degrees from the associate to the doctoral level, but findings are most detailed for bachelor's degree graduates as responding institutions provided the most detailed data at that level.

This report on outcomes for Class of 2017 graduates provides results for:

- 28.1 percent of all bachelor's degree graduates.
- 14.0 percent of all master's degree graduates.
- 9.2 percent of all doctoral degree graduates.
- 1.6 percent of all associate degree graduates.

Overall, 2017 must be seen as a relatively positive year for graduates. In general, employment improved; starting salaries also improved slightly—on paper—but, for the most part, lagged behind inflation.

What must be viewed as encouraging is that the improved outcomes were not strictly limited to one set of majors but were shared across both career-oriented and academically-oriented majors, across STEM and the humanities.

As for advanced degree graduates, 2017 was very positive for those at the doctoral level, but a little less so for those completing the master's. Advanced degree graduates continued to do better than their undergraduate degree counterparts, and the gap widened somewhat as the decreases suffered by advanced degree students were less than they were for undergraduates.

While the number of submitting institutions did grow marginally for this year's report, there is still considerable room for expansion. This is particularly true for the associate degree and the advanced degrees. Cross-time and cross-sector comparisons for these data are still quite limited due to the small number of responding schools. We look forward to developing even more robust comparisons as more schools adopt the standards and report their results in the future. Hopefully, the data presented here serves as a significant benchmarking tool for individual schools to identify strengths and weaknesses and to develop programs and strategies to improve the outcomes for their graduates in the future.

See the Appendix for details about the origin of the survey, survey methodology, time frame, and sources; explanations of and definitions for possible outcomes; details about how compensation and other statistics are calculated; and definitions of the various groupings, e.g., regions, Carnegie Classifications, and so forth.

OUTCOMES FOR BACHELOR'S DEGREE GRADUATES

Outcomes for Class of 2017 bachelor's degree graduates are virtually identical to those of their Class of 2016 counterparts.

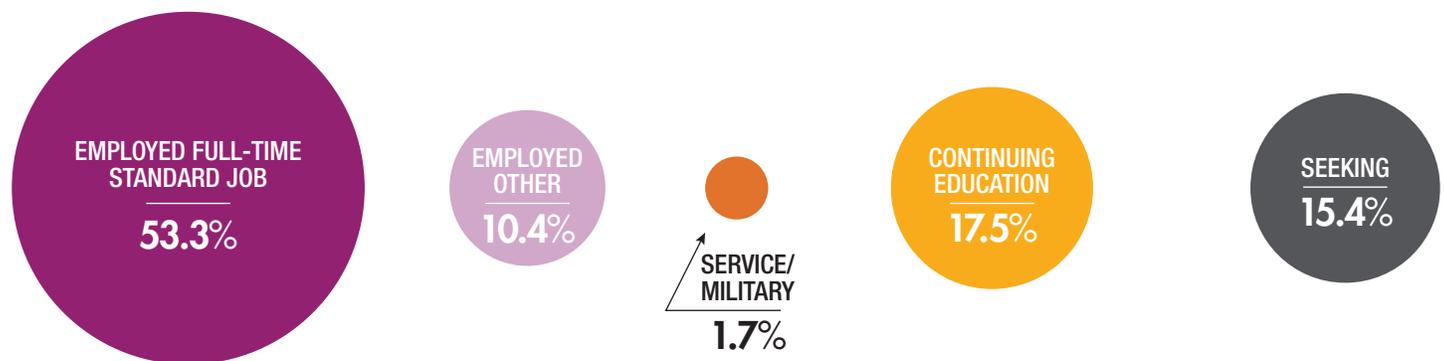

- The percent employed increased slightly from 63.5 percent to 63.7 percent.
- The percent employed full time fell slightly from 57.9 percent to 57.8 percent.
- The percentage pursuing additional education was exactly the same between the two classes: 17.5 percent.

In terms of salary, movement was also slight: Average and median starting salaries did increase by 1.5 percent and 0.5 percent, respectively; however, when salaries are controlled for inflation (about 2 percent), the average salary fell by 0.5 percent and the median dipped 1.5 percent.

The Class of 2017 did edge out the previous class when it came to securing an outcome within six months of graduation: 15.4 percent of 2017 bachelor's degree graduates said they were still seeking a job or additional education, down from 16.1 percent from the Class of 2016.

Figures 1 and 2 present the overall summary picture of outcomes for bachelor's degree recipients for the Class of 2017. Note that, at the bachelor's degree level, results were captured for 28.1 percent of all Class of 2017 bachelor's degree graduates.

FIGURE 1: Bachelor's degree summary outcomes

FINDINGS AND ANALYSIS: AN OVERVIEW

FIGURE 2: Class of 2017 bachelor's degree results

Total Graduates	549,664
Knowledge Rate	64.5%
Career Outcomes Percentage	84.4%
Percent Employed Overall	63.7%
Percent Employed Full-time	57.8%
Percent Employed Part-time	5.9%
Percent Standard Employment	57.9%
Percent Standard Employment Full-time	53.3%
Percent Standard Employment Part-time	4.6%
Percent Entrepreneur	1.0%
Percent Entrepreneur Full-time	0.9%
Percent Entrepreneur Part-time	0.1%
Percent Temp/Contract Employee	2.1%
Percent Temp/Contract Employee Full-time	1.5%
Percent Temp/Contract Employee Part-time	0.6%
Percent Freelance	0.6%
Percent Freelance Full-time	0.4%
Percent Freelance Part-time	0.2%
Percent Post-Grad Fellowship/Internship	2.2%
Percent Post-Grad Fellowship/Internship Full-time	1.8%
Percent Post-Grad Fellowship/Internship Part-time	0.4%
Percent Service	0.9%
Percent Military	0.8%
Percent Continuing Education	17.5%
Percent Seeking Outcome	15.4%
Percent Seeking Employment	11.9%
Percent Seeking Continuing Education	3.5%
Not Seeking	1.7%
Mean Starting Salary	\$50,253
Median Starting Salary	\$48,273
Mean Bonus	\$8,052
Median Bonus	\$5,654

Outcomes by region

By region, responding institutions from the Northeast and Midwest stand out in terms of the strength of their outcomes: Between 88 percent and 93 percent of graduates from the schools in these regions had landed an employment, educational, or service position at the time of the survey. Sixty-two percent of graduates from schools in New England were employed full time at a “traditional” employer, as were 61 percent in the states constituting the Plains region. (See Figure 3.)

By contrast, graduates from schools in the South and West appeared to have the most difficult time finding a landing spot immediately after graduation. More than one-fifth of these graduates were still seeking six months after the end of the academic year. The Rocky Mountain states were a bit of an exception with only 18 percent of 2017 graduates still seeking at the six-month mark.

Graduates from schools in the South and West also did somewhat worse when it came to starting salaries than did the graduates from the Northeast. The average starting salary in the South and West ranged from \$44,277 in the Rockies to \$52,942 in the Far West. By contrast, the average starting salary for graduates of schools in New England and the Mid-Atlantic regions approximated \$54,000.

FIGURE 3: Class of 2017 bachelor’s degree outcomes by region

	CAREER OUTCOMES PERCENTAGE	PERCENT STANDARD EMPLOYMENT FULL-TIME	PERCENT CONTINUING EDUCATION	PERCENT STILL SEEKING	MEAN STARTING SALARY
Total Class	84.4%	53.3%	17.5%	15.4%	\$50,253
New England	93.0%	62.2%	18.8%	6.9%	\$54,391
Mid-Atlantic	88.9%	54.6%	19.2%	11.0%	\$53,768
Southeast	78.2%	48.7%	17.3%	21.4%	\$47,632
Great Lakes	88.4%	58.4%	18.0%	11.5%	\$50,966
Plains	90.6%	61.0%	17.0%	9.2%	\$47,068
Southwest	76.7%	47.7%	16.7%	23.0%	\$48,902
Rockies	81.4%	47.7%	16.2%	18.0%	\$44,277
Far West	72.6%	41.1%	14.0%	26.6%	\$52,942

Outcomes by control structure

As Figure 4 illustrates, there is a significant difference in the outcomes results for graduates of public institutions as opposed to those who graduated from private colleges and universities. This is a pattern seen over the life of the First-Destination Survey, which began with the Class of 2014.

Public school outcomes rates are consistently below those of private, not-for-profit schools. The overall percentage of graduates who have landed by the six-month post-graduation is approximately 80 percent for public institutions; it is 91 percent for the private schools.

The differential in outcomes is due to both a smaller percentage of public institution graduates finding full-time employment and a smaller percentage of these graduates securing admission to an advanced degree program. Moreover, the outcomes differential between public- and private-sector institutions is exacerbated by the average starting salaries of graduates who found full-time employment. The 2017 graduates from public institutions received an average starting salary that was approximately \$5,000 less than the graduates from private institutions (\$48,621 compared with \$53,025).

FINDINGS AND ANALYSIS: AN OVERVIEW

FIGURE 4: Class of 2017 bachelor's degree outcomes by control structure

	CAREER OUTCOMES PERCENTAGE	PERCENT STANDARD EMPLOYMENT FULL-TIME	PERCENT CONTINUING EDUCATION	PERCENT STILL SEARCHING	MEAN STARTING SALARY
Total Class	84.4%	53.3%	17.5%	15.4%	\$50,253
Public	80.1%	50.4%	16.9%	19.5%	\$48,621
Private, Not-for-profit	91.0%	57.2%	19.0%	8.9%	\$53,025

Outcomes by Carnegie Classification

For the Class of 2017, results were examined by school type as defined by nine Carnegie classes. (See the Appendix > First-Destination Groupings: Definitions for details.)

As Figure 5 shows, overall, special focus institutions have the best outcomes ratio with the highest employment rates and the highest average salary for 2017 graduates. However, it must be noted that there are very few of these institutions in the overall college universe; in fact, the number of special focus institution graduates covered in this report is significantly less than for any other Carnegie class. Consequently, the outcomes data for special focus institutions needs to be viewed with considerable caution.

With that caveat, it can be noted that the result for special focus institutions is a clear reflection of how employers in the United States recruit. These institutions are focused on one specific degree program that is, typically, career-focused, such as engineering or business. American employers recruiting for specific jobs naturally look first to degree programs that produce very specific skills that are aligned with the technical skills requirements of the job.

Among the more general categories of bachelor's degree granting institutions, there is more of a mixed message in the results. Baccalaureate institutions both focusing on the arts and sciences and those with more diverse educational programs have the highest overall outcomes percentages. The arts and sciences schools reported a 92 percent outcomes rate, which was exceeded only by the rate for special focus schools. Baccalaureate schools classified as having a diverse academic program had an 88 percent outcomes rate, which was not as strong overall, but 62 percent of their graduates found full-time employment in standard job settings—higher than every other category except, again, that of special focus schools.

The down side for the graduates from baccalaureate schools came in the form of starting salary. The average starting salaries of around \$43,000 for these graduates was considerably below the overall class average of \$50,000.

Graduates from the research universities had virtually the opposite set of results. The research universities tended to report the lowest overall outcomes percentages along with the highest percent of graduates still seeking an outcome. Both the schools classified as R3 and those identified as R1 had overall outcomes rates of approximately 81 percent, with about 18 percent still seeking an outcome. R2 schools recorded an outcomes rate of 86 percent. Salary-wise, the graduates of the doctoral universities averaged the highest starting salaries of any of the Carnegie classifications, with the exception of the special focus schools. Those classed as R1 had an average starting salary of more than \$53,000; R3 schools followed at an average of \$51,000; graduates of the R2 institutions averaged just over \$49,000.

Results for schools classed as master's institutions tended to fall in between the baccalaureate schools and the doctoral universities. The master's schools tended to average relatively high outcomes and employment rates, 88 percent and 57 percent, respectively, while recording moderate starting salaries of around \$46,000. However, there are two outliers that need to be noted: One, the outcomes rate for the small master's programs was very low—just below 81 percent. This results in 19 percent of graduates from M3 schools still seeking an outcome at the six-month mark after graduation. Two, graduates from the M2 schools had the lowest average starting salaries (\$41,451) of any of the Carnegie classes.

FIGURE 5: Class of 2017 bachelor's degree outcomes by Carnegie Class

	CAREER OUTCOMES PERCENTAGE	PERCENT STANDARD EMPLOYMENT FULL-TIME	PERCENT CONTINUING EDUCATION	PERCENT STILL SEEKING	MEAN STARTING SALARY
Total Class	84.4%	53.3%	17.5%	15.4%	\$50,253
Baccalaureate A&S	92.0%	57.1%	18.7%	7.9%	\$43,666
Baccalaureate Diverse	88.0%	61.5%	12.1%	11.9%	\$42,729
M3: Masters-Small	80.9%	52.3%	15.2%	19.0%	\$46,298
M2: Masters-Medium	87.9%	57.8%	13.9%	12.0%	\$41,451
M1: Masters-Large	88.4%	56.4%	17.8%	11.4%	\$46,496
R3: Doctoral-Moderate	81.4%	50.3%	12.5%	18.3%	\$51,333
R2: Doctoral-Higher	85.6%	53.5%	19.1%	14.2%	\$49,088
R1: Doctoral-Highest	81.3%	50.8%	18.6%	18.3%	\$53,694
Special Focus	95.3%	75.2%	12.3%	4.7%	\$60,959

Outcomes by size of school

The final category by which we analyzed outcome results by type of school for this summary was size; size was defined by the school's undergraduate enrollment.

Figure 6 shows the outcomes results by size of school. As in previous reports, there is a significant difference between small to mid-sized schools and very large schools. The small to mid-sized colleges and universities tend to have stronger and relatively uniform outcomes rates—exceeding 90 percent of graduates reporting a positive landing six months after the end of the class year. By contrast, larger schools—those with enrollments of 10,000 or more undergraduates—had lower outcomes rate. Schools with enrollments between 10,000 and 20,000 reported that approximately 85 percent of their graduates had found a landing spot at the six-month mark, while those with more than 20,000 students had an outcomes rate of only 79 percent, the lowest for any size category.

As for starting salaries, there is not quite as linear a relationship between size and salary.

- The highest average starting salary (\$51,197) was reported by relatively small schools—those with between 2,000 and 5,000 undergraduates.
- This was followed by the largest schools, with average salaries that topped \$50,000.
- By contrast, the graduates of the smallest schools, i.e., those with enrollments under 2,000, had considerably lower starting salaries—approximately \$41,000, or 17 percent below the average starting salary for the class as a whole.

FINDINGS AND ANALYSIS: AN OVERVIEW

FIGURE 6: Class of 2017 bachelor's degree outcomes by size of school

	CAREER OUTCOMES PERCENTAGE	PERCENT STANDARD EMPLOYMENT FULL-TIME	PERCENT CONTINUING EDUCATION	PERCENT STILL SEARCHING	MEAN STARTING SALARY
Total Class	84.4%	53.3%	17.5%	15.4%	\$50,253
Under 2,000	90.3%	58.9%	16.8%	9.6%	\$41,514
2,000 - 4,999	90.7%	56.2%	20.0%	9.2%	\$51,197
5,000 - 9,999	90.7%	56.3%	19.1%	9.2%	\$49,817
10,000 - 19,999	85.0%	54.1%	16.0%	14.8%	\$50,969
20,000 +	79.3%	50.3%	17.1%	20.3%	\$50,470

Outcomes by academic discipline

This report features outcomes data for 33 academic disciplines; data are also available for an additional 215 majors within those disciplines. (Note: Complete outcomes detail for the 33 disciplines and 215 majors is available on the NACE website.)

As Figure 7 shows—and as might be expected—there is more variation across disciplines in terms of outcomes than there was across types of schools. This is attributable, in part, to the fact that there are more disciplines than there are school types. However, it is instructive that when we compare total outcomes percentages, the differences across academic disciplines is relatively negligible. The range in the career outcomes rate goes from 97.9 percent for construction trades at the top to 74.0 percent for general studies at the bottom. This may come as surprising to many analysts of the college marketplace who have assumed that academic major is paramount in determining after-graduation success, based on their almost complete focus on full-time employment with a traditional employer and the average salary engendered in that situation.

Much of the overall balance in total outcomes can be explained by the different post-graduate orientations students have in different majors. Students in career-oriented majors are focused on finding employment after graduation; for those in the arts and sciences, there is a much greater propensity to aim for a place in graduate and professional school. Thus, more than 60 percent of business and engineering majors are employed full time in a traditional setting at the six-month mark, and less than 20 percent of these graduates are in continuing education. In contrast, only 35 percent of physical science graduates and 30 percent of biological science majors are employed full time in a traditional setting, but 35 percent of these majors have found a place in a graduate education program.

If one focuses exclusively on employment and salaries after graduation, there is indeed a good deal of difference across majors in terms of post-graduation “success.” Clearly, disciplines with a technical and career orientation have a higher percentage of graduates in full-time employment than those focused on a more generalized curricula traditionally identified with a liberal education. The top disciplines in terms of the percent of 2017 graduates employed full time in a traditional job sector were construction trades, engineering technology, maintenance and repair technologies, computer and information sciences, and business. By contrast, the bottom five in terms of employment were biology, the physical sciences, general studies, history, and philosophy.

In terms of starting salary, there was less of a split between the two groups. Career-oriented disciplines tended to dominate both ends of the spectrum. So, the disciplines with the highest average salaries were computer science, engineering, mathematics, construction trades, and engineering technology. The disciplines with the lowest starting salaries were also part of the career-oriented group: theology and religious vocations, family and consumer science, public administration and social service, parks and recreation, and natural resources.

FIGURE 7: Class of 2017 bachelor's degree outcomes by academic discipline

CIP CODE		CAREER OUTCOMES PERCENTAGE	PERCENT STANDARD EMPLOYMENT FULL-TIME	PERCENT CONTINUING EDUCATION	PERCENT STILL SEEKING	MEAN STARTING SALARY

FINDINGS AND ANALYSIS: AN OVERVIEW

Which majors had the relatively best improved outcomes in 2017? Figure 8 shows the changes in outcomes by discipline for the Class of 2017 as compared with the Class of 2016.

There are some interesting results: For one, transportation and materials moving clearly had the greatest improvement in overall outcomes (7 percent), driven by an expansion of graduates in this discipline finding full-time employment. However, along with the increased employment came a major decrease in the reported starting salary—a greater than 7 percent drop. Peculiarly, there was little consistency between an increase in employment outcomes and an increase in starting salary.

Approximately one-third of the disciplines did have essentially positive improvements in key outcomes measures (the overall outcomes rate, the full-time employment rate, and starting salary) across the board. In rank order, these disciplines were communications technology, homeland security, education, English, architecture, health professions, recreation, communications, philosophy, and engineering. It should be noted that, while the majority of the disciplines with improved outcomes are career-oriented, the liberal arts and humanities are also represented.

As for the disciplines that suffered across the board declines in the outcomes measures, there were only three—legal professions, general studies, and multi-disciplinary majors.

FIGURE 8: Changes in bachelor's degree outcomes by academic discipline, 2017 vs. 2016

CIP CODE		CAREER OUTCOMES PERCENTAGE	PERCENT STANDARD EMPLOYMENT FULL-TIME	PERCENT CONTINUING EDUCATION	PERCENT STILL SEEKING	MEAN STARTING SALARY

FINDINGS AND ANALYSIS: AN OVERVIEW

OUTCOMES FOR MASTER'S DEGREE GRADUATES

Note: Data reports for the master's degree graduates continued to grow this year, capturing results for 14 percent of those graduating with master's degrees. Although the data are not as robust as those provided for bachelor's degree graduates, it is possible to examine results for master's degree graduates from different vantages. In fact, the number of responding institutions grew by approximately 10 percent for the Class of 2017 to a total of 158 reporting schools. However, data presented by region and control structure should be viewed with caution, as the limited number of schools in those categories may skew averages.

Class of 2017 master's degree graduates enjoyed positive outcomes, as Figures 9 and 10 illustrate.

- Eighty-nine percent of graduates had a positive outcome by the six-month post-graduation mark; that is just slightly below the results posted by their counterparts in 2015 (89.6 percent) and 2016 (90.5 percent).
- Class of 2017 master's degree graduates did lose some ground in terms of overall employment compared to those who graduated at the same level in 2016 (79.2 percent versus 81.2 percent), but kept pace with results posted in 2015 (also 79.2 percent).
- Perhaps the most concerning note for 2017 master's degree graduates was the decline in the percent of those with full-time positions in the "standard" labor market. For the Class of 2017, this figure was 68.7 percent, a noticeable decline from the 72.1 percent in 2016 and the 70.6 percent recorded for the Class of 2015.
- The average salary for 2017 master's degree graduates with a full-time position was \$65,725—up 0.8 percent in nominal terms when compared with the average 2016 master's graduate salary; however, when adjusted for inflation, that average salary represents a 1.2 percent decrease in real terms. Still, having a master's degree "pays": The differential between 2017 master's and bachelor's degree graduates was 31.8 percent—nearly identical to the 2016 differential (31.9 percent).

FINDINGS AND ANALYSIS: AN OVERVIEW

Outcomes by region

There are some obvious differences among regions. (See Figure 11.)

Master's graduates from the New England region appear to fare far better than their counterparts in other locations in their overall success in finding a landing spot, both in terms of employment and continuing education, and in the level of their starting salaries. The overall outcomes rate for master's graduates from New England was nearly 96 percent; in comparison, the overall national outcomes rate is 89 percent. In addition, the average starting salary for these graduates in New England was approximately \$85,000 compared with the national average for master's graduates of approximately \$66,000.

By contrast, the master's graduates from schools located west of the Mississippi did not fare as well as the rest of the nation. Master's graduates schools in the Plains states had the lowest outcomes rate—77 percent—with nearly 20 percent of graduates still seeking an outcome six months after the end of the class year. In addition, the average starting salary for graduates for each region west of the Mississippi was lower than the national average with the exception of the Far West.

FIGURE 11: Class of 2017 master's degree outcomes by region

	CAREER OUTCOMES PERCENTAGE	PERCENT STANDARD EMPLOYMENT FULL-TIME	PERCENT CONTINUING EDUCATION	PERCENT STILL SEEKING	MEAN STARTING SALARY

Rockies	85.9%	70.9%	6.5%	10.5%	\$57,910
Far West	82.2%	56.8%	5.9%	14.3%	\$77,223

Outcomes by control structure

The differences for master’s degree graduates across the control categories—public and private (not-for-profit)—are more muted than for the regional comparisons. (See Figure 12.)

In general, the graduates from private schools did somewhat better than those from the public institutions. Master’s graduates from the private schools had an overall outcomes rate of nearly 89 percent; the overall outcomes rate for master’s graduates at public schools was just under 84 percent.

Private institution graduates also bested their public school counterparts in average starting salary by more than \$10,000.

Private, Not-for-profit	89.1%	69.2%	6.0%	8.5%	\$72,739

FINDINGS AND ANALYSIS: AN OVERVIEW

OUTCOMES FOR DOCTORAL DEGREE GRADUATES

Note: The number of schools reporting outcomes for doctoral degree graduates declined slightly, from 81 for the Class of 2016 to 80 for the Class of 2017. Overall, data were collected for more than 16,000 graduates or 9.6 percent of Class of 2017 doctoral degree graduates. Results should be considered with that in mind.

While results should be viewed with caution given the number of schools reporting data, the overall outcomes for these graduates improved over last year's class. The career outcomes percentage rose from 89 percent in 2016 to 91.4 percent in 2017—the best overall rate for any degree level.

Most encouraging is the improved hiring picture for faculty positions. The percent of graduates finding academic positions more than doubled from just 3.1 percent in 2016 to 6.8 percent in 2017. This is the highest percentage of graduates moving into faculty positions in the three years we have reported doctoral degree outcomes.

The overall positive picture for doctoral degree graduates was capped by an increase in their average salary that exceeded the nominal increases experienced by the other degree categories and was the only change that exceeded inflation. Class of 2017 doctoral graduates had an average starting salary of \$79,247, which was a 3.3 percent increase (in nominal terms) over the average salary for graduates from the Class of 2016 of \$76,745. In real terms (controlling for inflation), the spending power for these new doctoral degree graduates increased by 1.2 percent.

FINDINGS AND ANALYSIS: AN OVERVIEW

ASSOCIATE DEGREE OUTCOMES

Note: Overall, this report captured results for just 1.6 percent of the associate degrees conferred to the Class of 2017. Due to low response rate, associate degree results contain information only for the degree as a whole and should be viewed with caution.

More than half (55 percent) of Class of 2017 associate degree graduates were employed within six months of graduation, and nearly 48 percent had full-time jobs with a traditional employer. (See Figure 15.) Approximately 7 percent had either part-time work, were engaged in some level of self-employment, or were employed in a fellowship or internship program.

As Figure 16 details, the percentage of associate degree graduates engaged in the various categories of self-employment (owning and operating a business, doing “temporary” project work, or freelancing) is quite small—less than 2 percent. Part of the reason is that many institutions are still not collecting this level of detail, which may be resulting in something of an undercount, especially where contract/temporary work is concerned.

The other key numbers to note are the 27 percent of the associate group that is continuing their education and the 12 percent that were still seeking either employment or a seat in an advanced educational program at the end of the survey period.

Due to the small number of respondents, reporting associate degree data trending is somewhat unreliable. Differences with small numbers tend to exacerbate the image of fluctuation from one period to the next. Therefore, differences in the results for the Class of 2017 compared with previous classes should be viewed with a great deal of caution. That being said, the overall picture for Class of 2017 associate degree graduates appears to be different than the results were for previous classes.

The percentage employed improved somewhat from that reported for the Class of 2016, increasing from 47 percent to 55 percent, with a shift in the balance toward more full-time employment.

However, the percentage enrolled in a more advanced degree program decidedly decreased from 41 percent to 27 percent. This may be attributable to the very strong labor market in the United States over the past two years. Graduates may be responding to the increased opportunities to secure employment by opting to go into the labor market quickly as opposed to delaying entry in favor of getting a more advanced degree.

Finally, while the labor market was strong in terms of obtaining employment and associate degree graduates took advantage, there was little payoff in terms of salary growth. The average nominal mean salary for Class of 2017 associate degree graduates increased by only 1.7 percent, while the median salary rose by an even smaller 0.8 percent. In real terms, i.e., controlling for inflation, the mean salary for associate degree graduates actually decreased by 0.3 percent, while the median salary went down by 1.2 percent in terms of real spending power.

ABOUT THE SURVEY

In 2012, the National Association of Colleges and Employers (NACE) issued a [position paper on the importance of first-destination/post-graduation surveys](#). The paper, which was developed by the NACE Advocacy Committee and endorsed by the NACE Board of Directors, called on all higher education institutions to “assess the career and employment outcomes for their graduates through a first-destination/post-graduation survey.” In issuing this position statement, NACE was acknowledging the need for transparency in post-graduation outcomes for consumers who were making a high-dollar investment in education and the relationship between institutional outcome assessments and the improvement of higher education organizational performance.

The 2012 position statement called for colleges and universities to collect and report on a comprehensive set of outcomes—not only employment outcomes, but also continuing education and public and private service results. Implicit in this call for transparency in outcomes reporting was the need for commonly applied definitions detailing results; commonly applied methods for data collection; and a uniform timeframe for collecting and reporting data so that university officials, consumers, and public policy analysts could assess the results with the understanding that the results were consistent and comparable.

To achieve the highest level of uniformity in assessing these outcomes data, a task force of experienced career services officials was appointed in 2013 to develop [a series of standards and protocols to guide university staff in collecting and reporting first-destination outcomes](#). The task force worked for a year and half developing these standards, which were finally published in January 2014. These initial standards were intended to assess outcomes for students graduating with either an associate or bachelor’s degree immediately after their undergraduate experience. In June 2015, another set of standards, consistent with the first, was developed by a second NACE task force to cover graduates with advanced (master’s and doctoral) degrees.

The standards and the results they produce are not intended to document the long-term career prospects of graduates, and the results published by the schools themselves or reported here should not be interpreted in that way. Rather, the focus is on the initial outcomes for graduates immediately after they receive their degrees. While this is certainly not a definitive return on investment from the time and money spent in earning the degree, it does tell us something about the transition from one educational status to another or from educational status to work force participant, and how quickly that transition is achieved.

In January 2018, NACE began collecting from its member higher education institutions the results for first destinations for the graduating Class of 2017. This was the fourth set of first destinations data for undergraduates and the third data collection related to graduate degrees. Overall, NACE received responses from 368 schools/career centers detailing results for their 2017 graduates in four degree programs—360 schools reported outcomes for bachelor’s degree graduates, 68 schools for their associate degree completers, 159 schools provided information for those completing a master’s degree program, and 81 institutions reported results for doctoral degree recipients. (A list of reporting institutions is available later in the Appendix.)

In total, the graduating classes of these reporting institutions represent more than 695,000 graduates (550,000 at the bachelor's degree level, 16,000 at the associate level, 113,000 at the master's level, and 16,700 earning a doctoral degree). This translates to results for:

- 28.1 percent of all bachelor's degree graduates.
- 14.0 percent of all master's degree graduates.
- 9.2 percent of all doctoral degree graduates.
- 1.6 percent of all associate degree graduates.

To our knowledge, this represents the most comprehensive view of graduate outcomes currently available.

METHODOLOGY

Data for this report came directly from the participating institutions. These data were reported to NACE during the period from January 4, 2018, to May 31, 2018. The primary data collection was handled by individual schools following the procedures outlined in NACE's *Standards and Protocols for the Collection and Dissemination of Graduating Student Initial Career Outcomes Information for Undergraduates* and its *Standards and Protocols for the Collection and Dissemination of Graduating Student Initial Career Outcome Information for Advanced Degree Candidates*. The key components participating schools followed for developing the data were as follows.

Timeline

Data collection on outcomes was to take place from the date of graduation until six months after the end of the class year. The NACE standards follow the Integrated Postsecondary Education Data System (IPEDS) standard in defining the class year of 2017 as extending from July 1, 2016, until June 30, 2017. This resulted in a deadline of December 30, 2017, for completing data collection. All results reported in this study are as of December 30, 2017.

This was the key criterion for reporting results to NACE in order to ensure comparability in the results. We also understood that meeting this criterion would be difficult in that a number of institutions would need to alter procedures of long standing, particularly if there are multiple offices involved in developing and analyzing information. However, we hope that schools will recognize the utility of the benchmarking outcomes information presented here and adjust their procedures in the coming years to meet the timeframe required by the NACE standards.

Sources

Students responding to outcomes surveys prepared by career services offices were the primary source of information for this report. However, the standards allow for developing information from a variety of alternative sources as well. For example, students will very frequently update their LinkedIn profile to reflect their new positions once they become employed. Mining this information is tantamount to a student marking "employed" on an outcomes survey. Additionally, faculty, employers who visit campus, and others may provide either new information about student landing spots or verification of a student's status that is gleaned from one of the alternative information sources or even the student's own response to the outcomes survey.

APPENDIX

Using multiple sources of information for individual student outcomes has two principal advantages. One, it expands the scope of information the college or university has on the outcomes of its graduating class. Direct responses from students to survey instruments delivered well after graduation are notoriously difficult to extract, resulting in very limited information. Expanding sourcing to include other legitimate sources knowledgeable of a student's situation significantly increases the institution's overall understanding of where its graduates have landed. Two, alternative sources of information provide enhanced verification for student outcomes. Relying on the student alone, while it is the most direct source of information, provides only an essentially unverified data point for the outcome. Having information from an employer, a student's input on LinkedIn, or a professor familiar with the student that is consistent with either the student's survey response or consistent among themselves provides a degree of confirmation that increases the level of confidence that the outcomes information are indeed accurate.

POSSIBLE OUTCOMES

The NACE first-destination standards call for a comprehensive assessment of graduate outcomes. In addition to detailing traditional employment, e.g., a graduate works for an employer with relatively steady work hours, a defined wage/salary, and a presumption of benefits such as medical insurance, the standards call for recognizing other employment situations. These additional employment categories included the following.

- **Entrepreneurs:** These are graduates who have started their own businesses (store, manufacturer, and so forth). They have multiple customers/clients and may employ other individuals in their operations.
- **Contract/temporary workers:** These graduates essentially work for one client but are working on a specific project, after which the graduate is not likely to be employed by that client.
- **Freelancers:** These are graduates who develop their own project, complete it, and sell it to a client; freelance activities are traditionally associated with artists, journalists, authors, and such.
- **Post-graduate fellowships and internships:** These are graduates who are performing a function, such as research or teaching, that is supported by a stipend provided by a university or an outside agency, such as the Fulbright programs sponsored by the U.S. State Department, or who are engaged in an experiential learning activity with any type of employer. These activities are for a limited period of time and do not contain the promise of continued employment after the fellowship or internship period expires.

For advanced degree graduates, two additional categories were included: faculty positions that are either tenure tracked or non-tenure tracked.

- In a non-tenure tracked position, a graduate is employed by an institution of higher learning to teach a set number of courses for a specified period of time—typically a semester appointment or a year-long contract.
- Tenure tracked positions are teaching assignments where the graduate is contracted to be at the institution for a more extended period of time, e.g., for three years. At the end of the contracted period or sometime during the period, the graduate is promised to come under consideration for a “permanent” appointment.

Full-time employment is defined by the standards as being employed for 30 hours per week or more on a regular basis. All but the faculty positions are employment categories that could be designated as either full time or part time.

In addition to these employment categories, there were three areas defined as positive outcomes for graduates. These were service, the military, and continuing education.

- **Service** is defined as being employed with an agency that is providing assistance to groups or individuals in the public interest. Examples are employment with AmeriCorps/VISTA, the Peace Corps, and Teach for America. This employment is generally for a limited duration and is assumed to be full time but paid at limited levels not on par with traditional employment categories.
- **Military** is employment with a branch of the United States Armed Forces. It is assumed that this employment is regular, full-time duty and is not simply as part of a reserve unit.
- **Continuing education** refers to students who are actively engaged in pursuing another degree completion or certificate that may be required for their profession, e.g., a certified public accountant.

Taken together, the various employment categories, service, military, and continuing education represent the total number of students who have achieved a *positive* outcome as of six months after the end of the class year.

Finally, there are two additional outcomes—still seeking and not seeking.

Still seeking: These are graduates who the institution knows have not landed in any of the proceeding categories but are still pursuing a landing. They may be principally interested in obtaining employment (still seeking employment) or the primary goal may be to be admitted to a graduate or professional program (still seeking continuing education).

Not seeking: These are graduates who the institution knows have decided *not* to pursue any landing (employment, service, the military, or continuing education) in this period after graduation.

For each graduate, only one outcome can be designated. Many schools have traditionally allowed students to respond to their outcomes surveys with multiple outcome designations, e.g., employed but still seeking. The standards do not allow for such a designation.

COMPENSATION CALCULATIONS

The standards call for collecting starting salary and guaranteed bonus information for graduates who are employed on a full-time basis. Not all reporting institutions were able to provide these compensation data; however, just under 82 percent of the bachelor's degree responding institutions did supply some form of compensation information.

Schools that did report data provided average and median starting salary information and average and median bonus data. Along with the salary and bonus information, a responding institution was also required to provide the number of salaries and bonuses that constituted its compensation information. NACE then calculated overall salary and bonus information for the class and subgroups within the class by weighting the individual institutional averages and medians by the number of salaries (or bonuses) represented by an individual institution's data. In total, the salary numbers reported to NACE represented the base compensation for 48 percent of the graduates identified as having full-time employment.

APPENDIX

SUMMARY CALCULATIONS

After the detailed data were transmitted to NACE, a number of summary calculations were developed from the data.

Knowledge Rate: This is the percentage of the graduating class for whom an outcomes destination is known. It includes the sum of all the employment categories, plus service and military, plus continuing education, plus the number of students still seeking an outcome or not seeking an outcome. It excludes those students for whom no information is available. Mathematically, the knowledge rate can be expressed as:

$(\# \text{ employed} + \# \text{ service} + \# \text{ military} + \# \text{ continuing education} + \# \text{ still seeking employment \& continuing education} + \# \text{ not seeking}) / \text{total graduates}$

Career Outcomes Rate: This is the number of graduates who have landed in any of the employment categories, plus service and military, plus continuing education divided by the number of students for whom an outcome is known. It excludes those graduates identified as not seeking an outcome. Expressed mathematically the career outcomes rate is:

$(\# \text{ employed} + \# \text{ service} + \# \text{ military} + \# \text{ continuing education}) / (\# \text{ employed} + \# \text{ service} + \# \text{ military} + \# \text{ continuing education} + \# \text{ still seeking employment \& continuing education})$

Additional rates, such as the percent of graduates in standard full-time employment, were created by taking the number of graduates in a specific category and then dividing by the number of known graduates as identified in the knowledge rate above.

To present the overall outcomes for the Class of 2017, NACE summed the data from the individual reporting institutions to compile overall numbers for the graduating base, number of known students, number employed in each individual category, number in continuing education, number still seeking employment, and so forth. These overall numbers were then used to calculate percentages for the knowledge rate, career outcomes rate, percent in continuing education, and so forth for the Class of 2017 as a whole by degree level. The numbers reported in the Overview section represent the aggregated results from the reporting institutions rather than the average of the individual reporting schools.

FIRST-DESTINATION GROUPINGS: DEFINITIONS

To allow for some degree of benchmarking, overall institution level results were divided along a number of different dimensions/groups. These groupings included geographic location, school types, institutional control (public vs. private), and the size of the institution as defined by its number of students. The following are the grouping definitions used in this report.

Region: Data were divided into eight geographic regions consistent with the geographic distribution of colleges and universities in the IPEDS database.

- **New England** (Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut)
- **Mid-Atlantic** (New York, New Jersey, Pennsylvania, Delaware, Maryland, and the District of Columbia)
- **Southeast** (Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Tennessee, Kentucky, Arkansas, and Louisiana)

- **Great Lakes** (Ohio, Indiana, Illinois, Michigan, and Wisconsin)
- **Plains** (Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas)
- **Southwest** (Oklahoma, Texas, New Mexico, and Arizona)
- **Rockies** (Colorado, Wyoming, Montana, Idaho, and Utah)
- **Far West** (Nevada, California, Oregon, Washington, Alaska, and Hawaii)

Carnegie Classification (Basic): Schools were grouped by type of degree offered. The groupings are from the basic classification scheme used by the Carnegie Commission on Higher Education. This year, there were sufficient data to report on nine classes.

- **Doctoral Research - R1 - highest research:** These are institutions that awarded at least 20 research doctoral degrees during the 2013-14 academic year (excluding doctoral-level degrees that qualify recipients for entry into professional practice, such as the J.D., M.D., Pharm.D., and so forth) and scored very high on aggregate and per capita indices related to doctoral degrees awarded and spending on research activities.
- **Doctoral Research - R2 - higher research:** These are institutions that awarded at least 20 research doctoral degrees during the 2013-14 academic year and scored very high on one of the aggregate and per capita indices related to doctoral degrees awarded and spending on research activities, but not very high on all the indices.
- **Doctoral Research - R3 - moderate research:** These are institutions that awarded at least 20 research doctoral degrees during the 2013-14 academic year, but did not score high on any of the aggregate and per capita indices related to doctoral degrees awarded and spending on research activities.
- **Master's - M1 - Large:** These are institutions that awarded at least 200 master's degrees in 2013-14.
- **Master's - M2 - Medium:** These are institutions that awarded between 100 and 199 master's degrees in 2013-14.
- **Master's - M3 - Small:** These are institutions that awarded between 50 and 99 master's degrees in 2013-14.
- **Baccalaureate Arts and Sciences:** These institutions where baccalaureate or higher degrees represent at least 50 percent of all degrees but where fewer than 50 master's degrees or 20 doctoral degrees were awarded during 2015 and where at least half of the bachelor degrees awarded were in majors classified as in arts and sciences.
- **Baccalaureate Diverse:** These are institutions where baccalaureate or higher degrees represent at least 50 percent of all degrees but where fewer than 50 master's degrees or 20 doctoral degrees were awarded during 2015, and where less than half of the bachelor degrees awarded were in majors classified as in arts and sciences.

APPENDIX

- **Special Focus:** These are institutions where the degrees are concentrated in a single field or a set of related fields, e.g. business, engineering, arts.

Institutional Control: Institutions are either publicly controlled or privately controlled. This means that the institution's direction set by its trustees is ultimately determined by a governmental entity (public control) or by an internal structure (private control). While private control can be further subdivided between institutions that have a for-profit objective and those that have not-for-profit status, this report does not make that distinction as only one institution with for-profit status provided data.

Size: This report uses five size categories, based on undergraduate enrollment reported in IPEDS for the 2017 academic year.

- **Very small:** Total enrollment is less than 2,000.
- **Small:** Total enrollment is greater than or equal to 2,000 but less than or equal to 4,999.
- **Medium:** Total enrollment is greater than or equal to 5,000 but less than or equal to 9,999.
- **Large:** Total enrollment is greater than or equal to 10,000 but less than or equal to 19,999.
- **Very Large:** Total enrollment is greater than or equal to 20,000.

Academic Disciplines/Majors: In addition to categorizing outcomes information for the institution as a whole, the standards report results by academic program.

Schools providing data by academic program were free to list their programs by the titles they use; however, to allow for comparisons, NACE staff reclassified program titles to conform with the Classification of Institutional Programs (CIP) system used in IPEDs.

The CIP system organizes academic programs into a tree structure: A general discipline forms the trunk, and academic majors are identified into two defined branches, the first being a more generic class of programs under the discipline; the second the more specific title. For example, business is classed as a broad discipline (the trunk) encompassing a group of relatively broad majors, such as business administration and management (the more generic class of programs), and very specific programs under that broad major, such as logistics/supply chain, which is a program under the heading of business administration and management.

Unfortunately, not every participating school in this year's study was able to provide outcomes information by academic program. However, we did receive program level information from 284 schools, which allowed us to identify program level results at trunk/discipline level for 33 broad disciplines and at broad major level for an additional 215 majors. Space considerations make publishing the detail for all these academic programs too cumbersome for this summary report, but the outcomes detail for each program is available on the NACE website. (See www.nacweb.org/job-market/graduate-outcomes/first-destination/)
